Career Information Fair at the Landshut College

From left to right: Florian Oßner (Member of the German Bundestag), Valentina Ajrizaj (apprentice toolmaker), Xenia Herrlein (apprentice toolmaker), Emma Schad (trainee industrial clerk), Andreas Heidenkampf (trainee industrial clerk), Hubert Aiwanger (Bavarian Economics Minister), Nicole Bauer (Member of the German Bundestag), Roland Ubrig (training manager commercial training)

On May 28, 2022, a large number of students, parents and teachers took the opportunity to gather information about professions and make personal contact with potential employers at the Career Information Fair organized by the working group SCHULE/WIRTSCHAFT Landshut. The fair took place at the Landshut College.

Students of the graduating classes of various schools as well as teachers and parents were presented with the wide range of training opportunities in Landshut and the surrounding area on site. At more than 100 booths interested people could inform themselves about a variety of apprenticeship professions as well as the possibility of studying at the Landshut College.

HA-BE participated the fair as well. Four HA-BE trainees and the training manager, Roland Ubrig, presented HA-BE as an attractive employer in the region and answered the questions of interested students, parents and teachers. Visitors got the opportunity to inform themselves about the offered apprenticeships and at the same time they could talk to the apprentices about their personal experiences to get a more detailed insight into the apprenticeship at HA-BE.

We also had a prominent visitor at our booth, Mr. Hubert Aiwanger, Bavarian Minister of Economic Affairs and Deputy Bavarian Minister President, who talked animatedly with the trainees about their training in the different areas at HA-BE and was very interested in their personal experiences in professional life.

For all those who could not attend the fair - more information about the training opportunities at HA-BE at www.habe.de/passion/karriere/deutschland/bildung
